

# **Consumer lawns**

Leading grass technology! We've compiled a versatile portfolio of grass mixtures, to ensure that you get the best possible service. Give it a try yourself and experience the power of Barenbrug grasses!

# Shadow

# Beautiful dense lawn in shade and sun!

- Shady conditions.
- Sunny conditions also possible.
- To avoid moss.

## Prevents moss growth

By creating a dense sward in shady areas, too, Shadow® prevents the growth of moss in those places. So your entire lawn will consist of grass, also in shady areas.

## Dense sward

The varieties contained in Shadow® will create a dense sward, precluding bare patches. This makes the grass mixture very suitable for both lawns and recreational areas.

## Very suitable for shady areas

As its name implies, Shadow® is very suitable for shady areas. In developing this mixture, the focus was on selecting varieties that grow well even in areas of (dappled) shade. Shadow® is not without reason the ideal grass mixture for use in shady areas.

### For lawns that can be enjoyed for many years

Shadow® can be used for many years, creating lawns that you will be able to enjoy for a very long time.

#### Good wear tolerance

Besides shade-tolerant varieties, Shadow<sup>®</sup> also contains varieties with good wear tolerance, making it very suitable for use in recreational areas, too. Children will be able to play to their hearts' content even in shady parts of a Shadow® lawn.

# Innovation Award winner

Shadow® includes the best shade tolerant varieties. On its introduction, this mixture won an Innovation Award for its combination of high shade tolerance, early spring growth, fast germination and the fact that it tolerates severe winters very well.

## **Specifications**

Tough and easy Play and sport Dry and strong Shadow and Dense and self-

Quick repair

## **Characteristics**

Higher wear tolerance

Higher drought tolerance

\*\*\*

Quicker establishment

Suitable for shade

\*\*\*

Finer leafed

\*\*\*

Less maintenance possible

食食食食

Less fertilizer required

\*\*\*

Higher disease tolerance

Self repairing

\*\*

Germination at low temperature

食食

Quicker germination

\*\*

Higher winter hardiness

Early spring growth

Speed of establishment Slow Nitrogen requirement Low Speed of growth average Sowing rate per 100m<sup>2</sup> 2-3kg Sowing rate per m2 20-30g 30-50mm Mowing height Packaging 1, 5kg 5-10 mm Sowing depth
